CI Practical 2
Problem Statement: Design a distributed application using RMI for remote computation where client submits two strings to the server and server returns the concatenation of the given strings.

StringRemote.java
```
import java.rmi.Remote;
import java.rmi.RemoteException;

public interface StringRemote extends Remote {
  String concatenate(String var1, String var2) throws RemoteException;
}
```

StringRemoteImpl.java
```
import java.rmi.RemoteException;
import java.rmi.server.UnicastRemoteObject;

public class StringRemoteImpl extends UnicastRemoteObject implements StringRemote {
  StringRemoteImpl() throws RemoteException {
  }
  public String concatenate(String var1, String var2) {
    return var1 + var2;
  }
}
```

Server.py
```
import java.rmi.registry.LocateRegistry;
import java.rmi.registry.Registry;

public class Server {
  public Server() {
  }

  public static void main(String[] var0) {
    try {
      StringRemoteImpl var1 = new StringRemoteImpl();
      Registry var2 = LocateRegistry.createRegistry(5000);
      var2.rebind("StringService", var1);
      System.out.println("Server is running and ready...");
    } catch (Exception var3) {
      System.out.println("Server Error: " + var3.getMessage());
    }

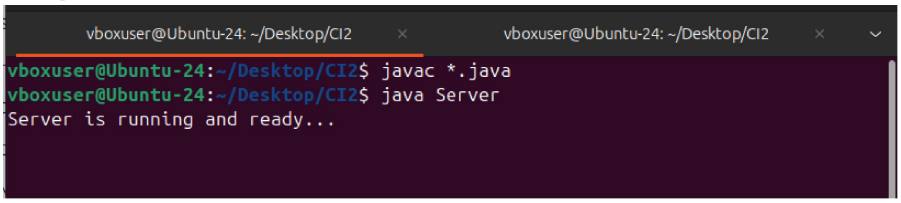
  }
}
```

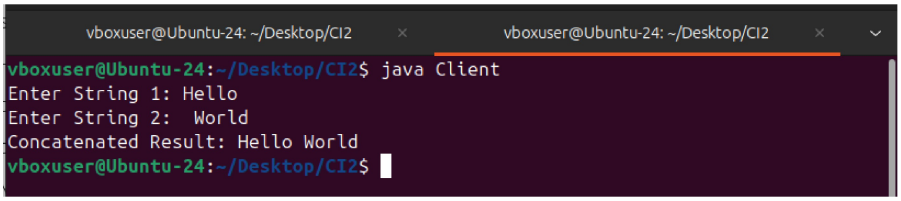
Client.py

```
import java.rmi.registry.LocateRegistry;
import java.rmi.registry.Registry;
import java.util.Scanner;

public class Client {
  public Client() {
  }

  public static void main(String[] var0) {
    try {
      Scanner var1 = new Scanner(System.in);
      System.out.print("Enter String 1: ");
      String var2 = var1.nextLine();
      System.out.print("Enter String 2: ");
      String var3 = var1.nextLine();
      Registry var4 = LocateRegistry.getRegistry("localhost", 5000);
      StringRemote var5 = (StringRemote)var4.lookup("StringService");
      String var6 = var5.concatenate(var2, var3);
      System.out.println("Concatenated Result: " + var6);
      var1.close();
    } catch (Exception var7) {
      System.out.println("Client Error: " + var7.getMessage());
    }

  }
}
```




Output:
